Lecture 16
Normalization

Semester 2 2018, Week 8

- Academic integrity:

https://app.lms.unimelb.edu.au/bbcswebdav/institution/Engineering/MSE_academic_integrity/Academic%20Integrity%20for%20MSE%20LMS.html

“Cheating – copying from or providing to another student or students an answer or answers to any assessment task or essay:

- *First year undergraduate student - failure of subject - Mark 0, Grade N;*
- **Any other student**, *second or subsequent offence - suspension or termination of enrolment - Mark 0, Grade N;*
- *Second or subsequent offence - termination of enrolment - Mark 0, Grade N.* “

Add WeChat powcoder

- By the end of this lecture, you should be able to:
 - Define normalization
 - Explain and identify database anomalies
 - Define and identify functional dependencies
 - Normalize relations to:
 - 1st Normal Form (1NF)
 - 2nd Normal Form (2NF)
 - 3rd Normal Form (3NF)

Anomalies in Denormalized Data:

- Consider the following denormalized table (relation) :

Student-ID	Course-ID	Fee
130	C200	75
200	C300	100
250	C200	75
425	C400	150
500	C300	100
575	C500	50
...

Assignment Project Exam Help

<https://powcoder.com>

- Insertion Anomaly:** A new course cannot be added until at least one student has enrolled (which comes first student or course?)
- Deletion Anomaly:** If student 425 withdraws, we lose all record of course C400 and its fee!
- Update Anomaly:** If the fee for course C200 changes, we have to change it in multiple records (rows), else the data will be inconsistent.

- A technique used to remove undesired redundancy from databases (Break one large table into several smaller tables).

- We can name the relations now
 - Customer (CustomerNumber, CustomerName, CustomerAddress)
 - Clerk (ClerkNumber, ClerkName)
 - Product (ProductNumber, ProductDescription)
 - Invoice (InvoiceNumber, Date, CustomerNumber, ClerkNumber)
 - InvoiceLineItem (InvoiceNumber, ProductNumber, UnitPrice, Quantity)

Assignment Project Exam Help

<https://powcoder.com>
Add WeChat powcoder

Assignment Project Exam Help

- Now let's go back to theoretical concepts...
<https://powcoder.com>

Add WeChat powcoder

- A functional dependency concerns values of attributes in a relation
 - A set of attributes X **determines** another set of attributes Y if each value of X is associated with only one value of Y
 - Written $X \rightarrow Y$ <https://powcoder.com>
 - X determines Y (If I know X then I also know Y)
- Assignment Project Exam Help*
- Add WeChat powcoder*
- Emp#  Emp-name
 - Emp#  Salary

- Determinants $(X, Y \rightarrow Z)$ $A(\underline{X}, \underline{Y}, Z, D)$
 - the attribute(s) on the left hand side of the arrow
- Key and Non-Key attributes
 - each attribute is either part of the primary key or it is not
- Partial functional dependency $(Y \rightarrow Z)$
 - a functional dependency of one or more non-key attributes upon part (but not all) of the primary key
- Transitive dependency $(Z \rightarrow D)$
 - a functional dependency between 2 (or more) non-key attributes

Functional dependencies can be identified using Armstrong's Axioms

$A = (X_1, X_2, \dots, X_n)$ and $B = (Y_1, Y_2, \dots, Y_n)$

Assignment Project Exam Help

1. Reflexivity: $B \subseteq A \Rightarrow A \rightarrow B$

Example: Student_ID, name \rightarrow name

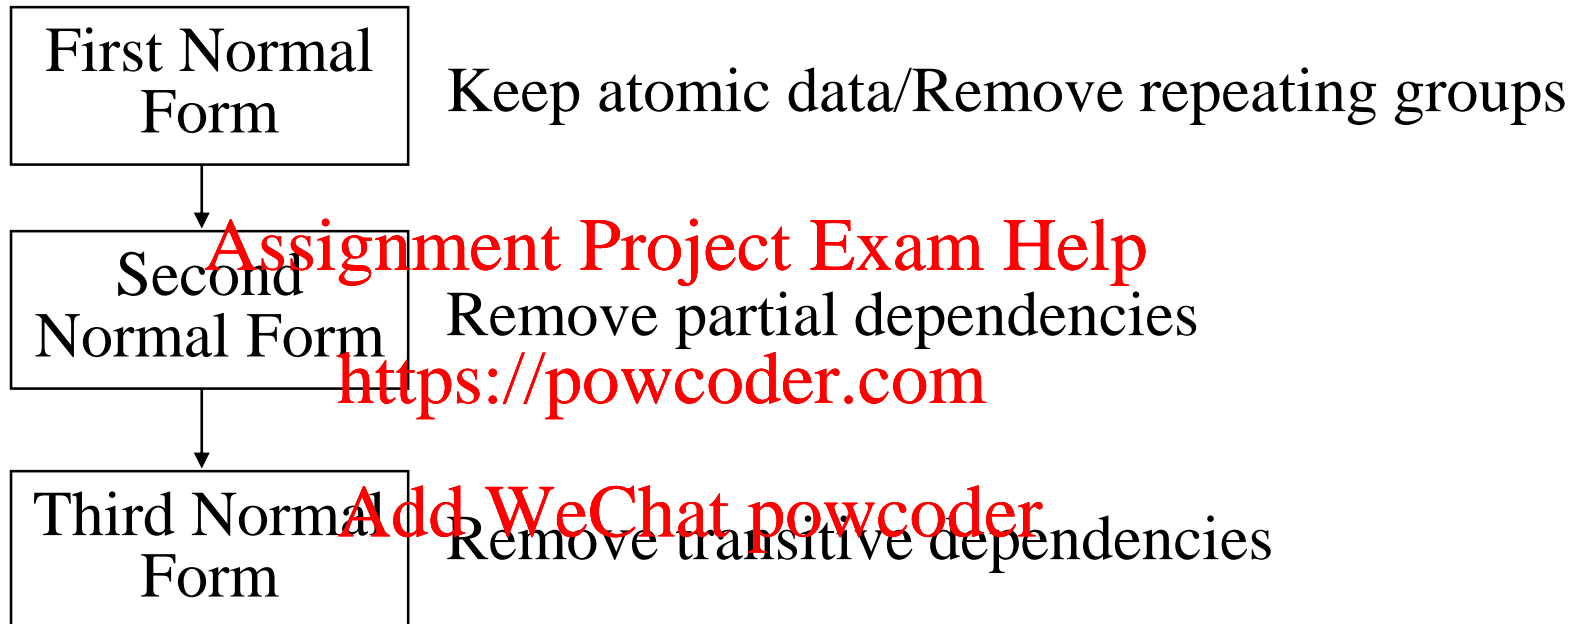

Add WeChat powcoder

2. Augmentation: $A \rightarrow B \Rightarrow AC \rightarrow BC$

Example: Student_ID \rightarrow name \Rightarrow Student_ID, surname \rightarrow name, surname

3. Transitivity: $A \rightarrow B$ and $B \rightarrow C \Rightarrow A \rightarrow C$

Example: ID \rightarrow birthdate and birthdate \rightarrow age then ID \rightarrow age

Remove Repeating Groups

- repeating groups of attributes cannot be represented in a flat, two dimensional table
- removing cells with multiple values (keep atomic data)

Assignment Project Exam Help

Set of values

Example: Order-Item (Order#, Customer#, (Item#, Desc, Qty))

- Order-Item (Order#, Customer#, (Item#, Desc, Qty))

- Order-Item (Order#, Item#, Desc, Qty)
- Order (Order#, Customer#)

Break them into two
Use PK/FK to connect

Remove Partial Dependencies

a non-key attribute cannot be identified
by part of a composite key

Assignment Project Exam Help

Example: Order-Item (Order#, Item#, Desc, Qty)

<https://powcoder.com>

- Order-Item (Order#, Item#, Desc, Qty)

Item (Item#, Desc)

Order-Item (Order#, Item#, Qty)

Partial dependency

Order-Item (Order#, Item#, Desc, Qty)

Order#	Item#	Desc	Qty
27	873	nut	2
28	402	bolt	1
28	873	nut	10
30	495	washer	50

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

- *UPDATE* change item desc in many places
- *DELETE* data for last item lost when last order for that item is deleted
- *INSERT* cannot add new item until it is ordered

Order-Item

Order#	Item#	Qty
27	873	2
28	402	1
28	873	10
30	495	50

*delete last
 order for item,
 but item
 remains*

<https://powcoder.com>

Item

Item#	Desc
873	nut
402	bolt
495	washer

add new item at any time

*change item
 description in one
 place*

Remove Transitive Dependencies

a non-key attribute **cannot be identified**

by another non-key attribute

Assignment Project Exam Help

Example: Employee (Emp#, Ename, Dept#, Dname)

<https://powcoder.com>

- Employee (Emp#, Ename, Dept#, Dname)
- 

Add WeChat powcoder

Transitive dependency

- ↓
- Employee (Emp#, Ename, Dept#)
 - Department(Dept#, Dname)

Example: Employee (Emp#, Ename, Dept#, Dname)

Emp#	Ename	Dept#	Dname
10	Smith	D5	MIS
20	Jones	D7	Finance
25	Smith	D7	Finance
30	Black	D8	Sales

- *UPDATE* change dept name in many places
- *DELETE* data for dept lost when last employee for that dept is deleted
- *INSERT* cannot add new dept until an employee is allocated to it

Employee

Emp#	Ename	Dept#
10	Smith	D5
20	Jones	D7
25	Smith	D7
30	Black	D8

*delete last emp in
dept, but dept
remains*

Assignment Project Exam Help

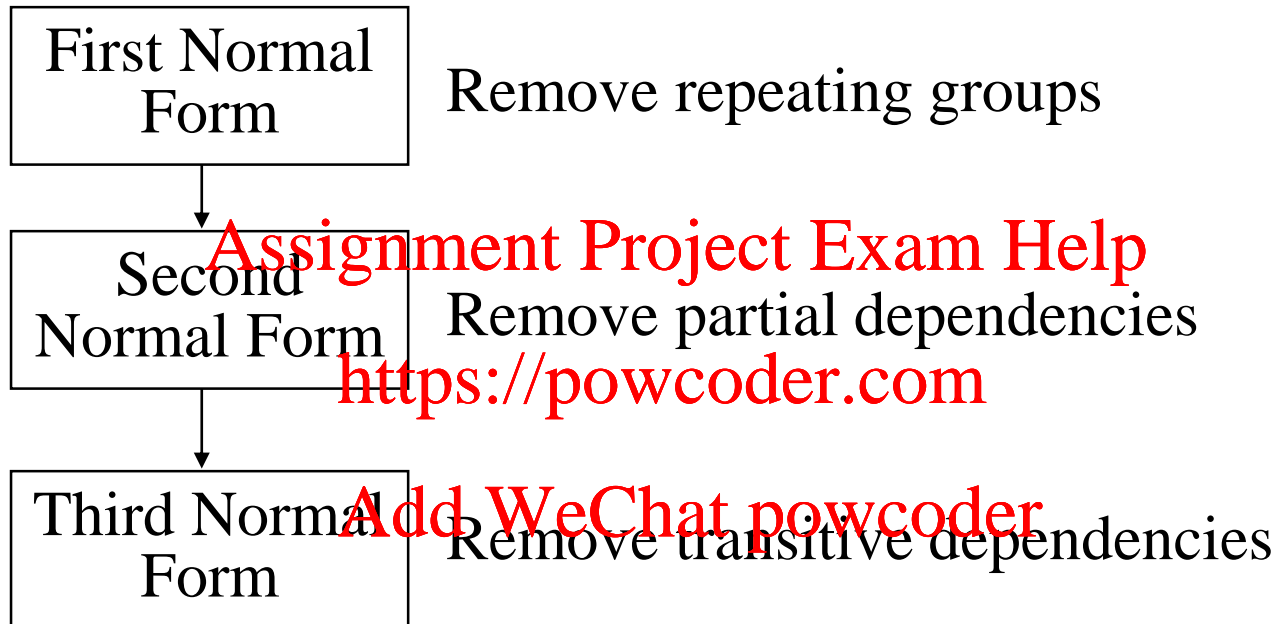

<https://powcoder.com>

Add WeChat powcoder

add new dept at any time

Dept#	Dname
D5	MIS
D7	Finance
D8	Sales

*change dept
name in one
place*

Normalisation:

- Normalised relations contains a minimum amount of redundancy and allow users to insert, modify, and delete rows in tables without errors or inconsistencies (anomalies)

Assignment Project Exam Help

<https://powcoder.com>

Denormalization:

- The pay-off: query speed.
- The price: extra work on updates to keep redundant data consistent.
- Denormalization may be used to improve performance of time-critical operations.

Add WeChat powcoder

- Normalisation Process
- Anomalies
- Functional dependencies
- Denormalisation
